

Problem 6

Identity Checker

Write a program P that reads a text file and determines whether file just read is equal to the source code of P itself. P cannot read from any other file or device.

Input

Input will consist of one file name, and that is the only file the program will be allowed to open.

Output

Output will consist of the word "Yes" or "No" depending on whether the file provided is equal to the source code of the program.

Sample input

```
identity.exe compare.txt
```

Sample input file (compare.txt)

```
Is this the source code of the program?
```

Sample output

```
No
```
